## THE KRULL.

A winter Pear of our introduction which promises to become one of the leading varieties. Its favorable points are: 1st—Hardiness and productiveness of tree. 2nd—Its finely colored fruit and thin tough skin makes it a valuable marketer. 3d—Its late keeping qualities combined with fine flavor will make it second to none for profitable planting. See enclosed circular for what others say about it as also its origin.

## **To Our Patrons:**

In presenting this, our annual catalogue and price-list, we are pleased to announce that our stock of trees and plants is of unusually fine quality and more extensive in quantity than ever before, which will enable us to fill orders entrusted to us promptly and satisfactory.

Purchasers will know the advantage of dealing direct with an old and reliable firm, who have done a legitimate business for fifty years, and thoroughly testing all fruits and know what they offer their customers.

We employ local agents, of course, but they are men who are well acquainted in their respective territories and moreover we personally superintend the filling of every order, hence our customers may rely on being faithfully and honestly dealt with while placing their orders with such agents.

# Terms and Conditions.

**TERMS: Net Cash Except by Special Agreement.**

Small parcels sent by mail, at rates in this list, with postage added to bill.

Packages will be delivered to the Express, Railroad, or on board of Missouri River Packets at St. Charles, Mo., free of cartage. When proper receipts for delivery at any of these places are procured, the goods are entirely at buyer's risk, and if lost or injured, recourse must be had on the carriers.

Errors by us will be cheerfully corrected, but should be reported at once after receipt of goods. Money may be sent by Express, Draft on St. Charles, St. Louis or New York City banks, or through Postal Order, or Registered Letter. If by private check, except on St. Louis or St. Charles, add 25 cents for collection. Parties unknown to us must accompany their orders with the cash, or give satisfactory references as to their responsibility.

All articles will be distinctly and carefully labeled before packing. Give your full Name, Postoffice, County and State, with your orders; also state by what conveyance the goods are to be sent. If the latter is omitted we will use our best judgment, and forward accordingly; but in no case will we be responsible for losses or delays occurring through such shipments.

## NOTE.

These quotations are for the quantities specified, except 5 at 10, 50 at 100 and 500 at 1000 rates. On orders amounting to \$50.00, or more, we will give special rates. All contemplating to plant largely will please send us their list of wants and we will quote lowest figures.

## TIME OF TAKING UP.

Stock will be in condition to dig in Fall, after October 15th, until hard freezing. In Spring as soon as frost is out of the ground, usually about March 1st.

**Order Early and Secure Full Stock to Select from.**

# THE "KRULL"

Combines among its claims for a place along-side other sorts, long keeping, good shipping, attractive appearance, fine size, pleasant flavor, vigor, health and productiveness of tree. All these are qualities which will render it most desirable to the commercial fruitgrower as well as to the amateur.

While the introduction of this new Pear affords me great satisfaction, I feel confident that it will also, to a great extent, satisfy the desire for a really good Winter Pear, suited to the "South West".

## DESCRIPTION.

The cut on front page fairly represents size and shape. The color is lemon yellow, covered with a delicate bloom, giving a rich and attractive appearance. Skin thick and strong; flesh white, firm until fully ripe, when it becomes juicy and melting; flavor, sweet, rich and pleasant.

The tree is vigorous and robust of somewhat irregular habit, very productive; the original tree from which I propagate having born fair annual crops since of bearing age, while in 1888 it produced 17 and '89, 19 bushels of hand-picked fruit. The crop of '90 was destroyed by frost following a contracted very mild spell of weather during January which had started the buds almost to breaking open. This season the crop is again moderate, caused by severe clipping of the tree for wood to propagate.

## HISTORY.

Upon thorough inquiry I learn that my first information, pointing to a remote pioneer origin, was erroneous. The following is well authenticated: About 1835 a Mr. "Hoester" immigrated from Germany, bringing with him a number of small pear trees, among them the now "Krull", which, he planted on his farm in Greens Bottom, St. Charles County, Mo., where it grew and produced fruit. A Mr. Krull saw the fruit and grafted from the tree, and this was the origin of the tree from which I have my stock.

The original "Hoester" tree has perished and Mr. Hoester has long since departed this life, but his memory will remain and be perpetuated through this pear, which we may enjoy and utilize.

Under the above circumstances the name should have been "Hoester", but the fruit having become somewhat known as "Krull" and furthermore, whereas a man of that name has perpetuated it, I deem it best to leave the name as it is.

## PRICE LIST 1891-2.

2 year tree, 4-6 feet, \$1.50 each.

1 year tree, 2-3 feet, \$1.00 "

1 year tree, (dwarf) 2-3 feet \$1.00 each.

One year trees will be sent by mail at above price if money is sent with order.

## TERMS.

Orders from unknown parties must be accompanied by the money to secure attention.—Orders will be filled in rotation as received.

C. T. MALLINCKRODT.

N. B.—No buds or scions for sale.

## TESTIMONIALS.

The following testimonials were received in reply to specimens sent before entering into the propagation of the "Krull" largely, not wishing to rely on my single judgment as to its merits &c. I think they fully establish all I claim.

FROM SAMUEL MILLER,

Bluffton, Mo., January 14, 1890

This morning I ate one of the Krull pears you gave me while at your place October last. I find it so good that it will be a real pleasure to me to recommend it. I consider it the BEST PEAR that I have met with so late in the winter in Missouri. It will keep until April easily.

(Note.—These were specimens which had been exhibited at fairs during first half of September, 1889, and were not fully grown nor matured and consequently no FAIR SAMPLE.)

Upon sending Mr. Miller more and fairer specimens he wrote, January 30, 1890:

Thanks for basket of Krull Pears and Scions—I will wager there is not another pear as good, as handsome and in as good keeping at this time in the country, that is, grown in this latitude. If managed right it will bring you fame and fortune.

On April 26, 1890, Mr. Miller again writes: There are still two SOUND pears of the Krull you sent in January in my cellar.

FROM A. BLOOMER,

Fredericktown, Mo., January 11, 1890.

C. T. Mallinckrodt, Esq., St. Charles, Mo.—Dear Sir—Your favor dated the 7th inst., is before me. I also received the little basket containing 8 pears. I ate one, gave one to my grand children and one to B. B. Cahoon, a lawyer, who is an amateur horticulturist. He ate it at once and pronounced it delicious. My opinion is, that, although not so fine as Bartlett, Seckel and Beurre D'Angon at present, it is a valuable acquisition on account of its productiveness not only, but especially for its keeping qualities.

Although of medium size, its fine uniform appearance and nice color, make it attractive and its leathery skin permits its safe shipping to any part of the world.

I keep the five specimens remaining in the little basket, in paper and bran, as you have sent them to me, covered on the east part of my house, in order to test how long they keep to attain perfect ripeness, when they will have a still better flavor than at present.—I then propose to send one to the "Rural World", wherein I shall try to describe it.

I mean to use two scions in grafting on a standard LeConte and the other on Quince.

I thank you heartily for the favor, and should I at any time be able to serve you in any thing, it would afford me the greatest pleasure, to testify to you my gratefulness. Please to let me know when you'll have some for sale.

FROM P. M. KIELY & Co, Commission Merchants, No. 614 North Third Street, St. Louis, Mo.

January 30th, 1890.

C. T. Mallinckrodt, — Dear Sir. — Sample of Pears duly received. I was very much surprised to find such an attractive and highly colored pear at this time of the year, and more especially from this State. I ate one of them, and while the texture or quality is not equal to the Winter Nelis, I certainly regard it as a valuable acquisition to the list of late varieties of pears. Its fine bright color for a late variety, gives it an especial commercial value, as it would sell much more readily than a less attractive sort, even if the quality was not as good.

FROM E. T. HOLLISTER & Co, Commission merchants, 811 North Third Street, St. Louis, Mo.

March 1st, 1890.

C. T. Mallinckrodt, Esq., — Dear Sir. — Your sample of Krull Winter Pear came duly to hand, and we kept one of the specimens 'till to-day.

While the quality is not equal to some of the fall varieties, we regard it as a valuable acquisition on account of its keeping quality.

FROM T. V. MUNSON, ESQ.

Denison, Texas, February 3d, 1890.

The two specimens of "Krull" Pear and letter were received

The specimens were somewhat shriveled yet still juicy, agreeably sweet with a good flavor, reminding of the Bartlett. Had they been kept in a little more moist condition, think they would have been plump and more tender.

Altogether it is a good pear and has remarkable keeping qualities.

I thank you for the specimens which allowed me to see and test this remarkable pear. I know of no other such keeper among pears.

Alton, Ill., January 1st, 1889.

MR. C. T. MALLINCKRODT, — Dear Sir. — When at the meeting of the Missouri Horticultural Society in December I saw your new pear and was pleased with what I saw and heard about it. I had some sent to Hamilton to our meeting, one of these I brought home and ate it to-day and found it good. It was sound and would probably have kept sound for some time longer. I would like to know how it is for productiveness, and how long it takes to come into bearing. Also whether any scions can be had for testing, if so, I would like to get some. An early reply will greatly oblige. Respectfully,

E. A. RIEHL.

Rochester, N. Y., Feb. 12th, 1890.

MR. C. T. MALLINCKRODT, St. Charles, Mo.—Dear Sir.—Your favor of 30th ult., came duly to hand. Also the pear in good order. I have kept it in a warm room since it was received, but the heat seems to have no effect. It will be a good baking or stewing pear and for those purposes valuable, as it keeps so well. If a good grower and bearer it will be worth propagating.

Owing to the unusually wet and warm autumn and winter, our fruits have all kept badly. We had the last of Josephine de Maline and Winter Nelis a day or two ago.

Respectfully yours, P. BARRY.

Lamar, Mo., February 3, 1890.

C. T. MALLINCKRODT, St. Charles, Mo. — Dear Sir. — The pears you mailed for me came in good condition. THEY ARE BEAUTIES. I sampled one of them. I find it to be extra fine grained and from the solidity of the flesh and smooth, tough skin, it is evidently a long keeper and a very good pear. I think it will pay to propagate and place in the front with our best pears.

Respectfully, C. H. FINK.

Marengo, Ill., Feb. 1, 1890. From C. W. Prescott. Sample of "Krull" received; accept thanks for same. Have cut one of the pears and the others I will keep. Quality and appearance good; for market I should say it would be No. 1, the skin is strong enough to hold it and it will certainly carry well.

U. S. Department of Agriculture,  
Washington, C. C., Feb. 6, 1890.

MR. MALLINCKRODT, St. Charles, Mo. —  
Dear Sir. — Having recently received two  
pears from you, I desire to say that they ar-  
rived in quite good condition. In quality the  
fruit is quite good and seems to be a late  
keeping variety. If the tree bears well and  
produces specimens of about the size which  
I have received, I do not see why it may not  
prove a valuable addition to the list of  
winter pears. Hoping to hear from you  
further on the subject, and have a complete  
history of the variety, I am

Very respectfully,

H. E. VAN DEMAN, Pomologist.

On February 17, 1890, Mr. VanDeman writes:  
I am anxious to learn everything known  
about the "Krull". There is scarcely any  
doubt in my mind about its being a valuable  
acquisition to the list of winter pears, in  
which, as you well know, we are very defi-  
cient. The flesh of your pear is very firm  
and the flavor is good. The name "Krull's  
Winter" is rather too long, and I would sug-  
gest, that it be abbreviated to "Krull" un-  
less you desire to have some other name  
given it. The rules adopted by the Ameri-  
can Pomological Society and some other so-  
cieties of like character do not favor double  
names or those with high sounding titles  
and other objectionable features, hence I  
suggest the single name.

Very respectfully,

H. E. VANDEMAN, Pomologist.

Washington, D. C., January 15, 1891.

MR. C. MALLINCKRODT.—Dear Sir.—In the  
course of the work of this division, a great  
many fruits having choice qualities have  
been reported, and many of them are well  
worthy of being tested in different parts of  
the United States. To this end, I respect-  
fully request you to send me scions of your  
Krull pear, samples of fruit of which I have  
already received. If you will be kind  
enough to send me from 25 to 100 scions of  
that variety, carefully packed in damp moss  
or some other material, I will place them in  
the hands of the directors of the State Ex-  
periment Stations and a few other careful ex-  
perimenters for the sole purpose of having  
the variety carefully tested and compared  
with other varieties. If it proves of special  
value in any locality you will be promptly  
notified, and in any case, it is understood  
that the variety is not to be disseminated by  
the parties receiving scions for experiment,  
except by your consent. By this means a  
valuable variety may be brought to notice  
that will be a benefit to the world. Solicit-  
ing your earnest and hearty co-operation in  
all matters pertaining to fruit culture, I am

Very respectfully,

H. E. VANDEMAN, Pomologist.

NOTE. — In reply to the above, I sent on  
March 2, 1891, sixty scions to the Department  
for the purpose stated.

Pres. Evans, Missouri State Horticultural  
Society, writes under date, Harlem, Mo.,  
Feb. 12th, 1890, among other matter: Yes, I  
brought some of the "Krull" home from Le-  
banon, Mo., and have them yet. It seems to  
have the merit of being a good keeper and I  
think will prove valuable.

Mr. F. Lionberger of Hugo, Montgomery  
County, Mo., under date of Feb. 3, 1890, says:  
Specimen of "Krull" came to hand in fine  
condition. It is fine looking and in shape  
and size somewhat resembles the Kieffer.  
I cut one and divided it up among a number  
of persons and they all pronounced it good  
to very good. To judge from the thickness  
of the skin and firmness of the flesh, it must  
be a good shipper. It is undoubtedly the  
best winter pear that I have seen since I left  
Europe.

Oak Glen Vineyards, Napa County, Cali-  
fornia, Feb. 12, 1890, by Mr. Geo. Hussman.  
The sample of "Krull" pear you were kind  
enough to mail me, received. For Missouri  
and the Southwest generally it will prove a  
great acquisition; the fruit being of fine  
quality compared with the best old standard  
varieties and is certainly an excellent keep-  
er and shipper. Were I still in Missouri, I  
would not hesitate to plant of it largely.

Cobden, Ill., Feb. 6, 1890, from T. E. Good-  
rich: Specimens of "Krull" pear received.  
We ate one of the pears; it was good, sweet  
and rich. The other is not quite ripe and  
bids fair to keep several weeks. The middle  
of February will be doing very well for a  
pear.

Gilman, Ill., Jan. 31, 1890. F. J. Mann  
writes: Samples of "Krull" received. The  
pears are so solid have not yet tested for  
quality, and from appearance would say,  
that it is a very valuable acquisition to our  
winter fruits, and will certainly make a place  
for itself in the markets, for which it seems  
to have special qualifications.

Savoy, Ill., Feb. 18, 1890. Hy. M. Dunlap  
writes: The "Krull" pear arrived a little  
the worse for their handling in mail-bars,  
but were, I should say, very fair in quality  
and size and promise to be a valuable vari-  
ety. If they will keep this long in Missouri,  
they ought to prove very desirable for Cen-  
tral and Northern Illinois.

From J. Webster, Centralia, Ill., President  
of Illinois State Horticultural Society, under  
date of Feb. 2, 1890, writes: We acknowledge  
receipt of sample of "Krull" pear. In quality  
it compares with the few winter pears we  
have in this latitude; better than Buerre  
Easter, hardly as good as Winter Nelis and  
Glout Merceau, but better quality than Vicar  
or Horns Seedling, a variety we got from  
St. Louis County, Mo., a few years ago. I  
have no hesitancy in saying that it is worthy  
of being added to our short list of pears.

A. C. Hommond, Secretary of Illinois  
State Horticultural Society, Warsaw, Ill.,  
writes under date Feb. 4, 1890. Yours of a  
late date, also the specimens of "Krull" pear  
came duly to hand. The fruit is fair in qual-  
ity, perhaps good for a winter pear, this in  
connection with its size, appearance and  
keeping qualities will certainly make it val-  
uable.

Nursery, Ill., February 8, 1890. J. V. Cotta  
writes: I received sample fruit of "Krull"  
pear. I find them just commencing to get  
mellow; flavor sweet, rich and aromatic;  
strictly first-class quality; in size the fruit  
was above medium and fine appearance. Its  
keeping qualities ought to make it a valua-  
ble market fruit.

Alton, Ill., February 8, 1890. J. S. Brown  
writes: Basket containing five pears re-  
ceived. As to the quality of the pear would  
say, it would grade as very good. In ap-  
pearance it is fine and for market purposes  
I think it an acquisition from the fact that  
we have no pear that will keep until this  
time of the year. Our winter pears grown in  
this latitude will not keep after Christmas,  
even with the greatest care.

Report of Committee on Rewards at State  
Horticultural Society at Lebanon, Mo., Dec.  
1889. We find on the tables from C. T. Mal-  
linckrodt, of St. Charles, a medium-sized  
light yellow pear of good quality. It is late  
and good a keeper as it is said to be, which it  
has the appearance now, judging by the  
samples before us, it will have a value, as  
we have no pears that will keep well into the  
winter in this climate, and we therefore re-  
commend it for trial.

E. A. RIEHL, }
